Uses

Short-term treatment and control of patches of eczema and dermatitis including atopic eczema and primary irritant and allergic dermatitis.

Format and Ingredients

Cream containing:

Clobetasone Butyrate 0.05% w/w,

Dosage

Adults: apply sparingly to the affected area twice a day for up to 7 days. If the condition does not improve, or becomes worse in the first 7 days, medical advice should be sought. Medical advice should also be sought if an improvement is seen in 7 days but further treatment is required.
Children: not recommended except on medical advice.
